NOA AHARON

Data & Product Analyst | Analytics, Modeling & KPIs

052-6384448 | noaharon11@gmail.com | linkedin.com/in/noaharon11 | github.com/Noaharon11

PROFESSIONAL SUMMARY

Data-driven analyst with 2+ years in high-volume fintech payment operations, building statistical baselines and predictive anomaly-detection models over live transaction data. Strong in SQL, Excel and Python, with a sharp eye for patterns and trends. Passionate mobile gamer, eager to apply modeling and economy thinking to player engagement, retention and revenue.

WORK EXPERIENCE

Payment Operations Monitoring Specialist **Jul 2024 - Present**

Nuvei

- Built, on my own initiative, a predictive anomaly-detection model that forecasts each client's expected API error rate from a same-hour baseline of the past 1-3 weeks and flags deviations every 10 minutes.
- Replaced manual checks with automated alerts, shortening time-to-detection of client-impacting issues.
- Built an error-filtering model that separates noise from real signals, cutting false positives.
- Monitor macro and per-client KPIs across global payment flows with SQL, Excel and dashboards, spotting patterns and trends before they become incidents.
- Turn incident and transaction analysis into actionable insights for Product, Engineering and DevOps teams.

Technologies: SQL, Excel, Python, XSOAR, Dynatrace, Splunk, Grafana

PROJECTS

Boarding - Team Learning & Progress Platform

Product built end to end for onboarding, training and team progress tracking.

- Owned the product end to end: training tracks, knowledge base, quizzes, assignments and reminders.
- Defined progress and engagement KPIs so managers can track completion and spot struggling users.
- Implemented role-based access and Confluence sync to keep content up to date.

Technologies: React, TypeScript, Node.js, PostgreSQL

CommuneCart - Community Commerce Platform

Community commerce platform with optimized logistics and order management.

- Integrated NVIDIA cuOpt optimization to model and minimize delivery routing costs.
- Designed data-driven workflows for orders and task management.

Technologies: React, TypeScript, Node.js, NVIDIA cuOpt

SKILLS

- Data: SQL, Excel, pivot tables
- Modeling: forecasting, anomaly detection
- Tools: XSOAR, Dynatrace, Splunk, Grafana
- Analytics: KPI monitoring, trend analysis
- Languages: Python, TypeScript

EDUCATION

B.Sc. in Computer Science **Oct 2022 - Jul 2025**

The College of Management Academic Studies
